

The Smart Light Module (SLM) accessory is fully compatible with all connected GYS chargers («CNT»). Linked via a simple connecting cable and powered and controlled by the charger, it updates the user on the charger's operating status using a multicoloured indicator light and warning buzzer. This is the ideal accessory for anyone working far away from their CNT charger.

Indicator lights

A five-colour code advises the user on the operating status of the connected charger:

Colour	Charger Status
 (off)	No charge in progress / battery disconnected
	Lead battery charge in progress
	Lithium battery charge in progress
	Charge finished
	Charging fault or charger error

Comes with:
- SMC connector cable (DB9 - 0.5 m)
- Velcro strips

Warning buzzer

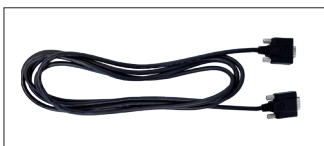

In addition to the indicator light, the SLM is equipped with a warning buzzer that sounds in the event of a fault (flashing red).

Velcro straps

The SLM comes supplied with velcro adhesive tapes allowing it to be easily and securely fixed in any location.

Optional accessories

SMC Cable (DB9)
Length: 3 m
Réf. 025691

COMPATIBLE WITH «CONNECTED» GYS CHARGERS
