

GYS SCOOPS AWARDS

FRENCH WELDING manufacturer GYS is enjoying industry recognition after being awarded two industry awards. Its new GYS TIG 250 AC/DC welder has received a lot of attention since its launch in January 2013 thanks to its innovative fan-less design through utilisation of liquid-cooled electronics. Now GYS has been awarded the Industrie Lyon Award for Technology 2013. Industrie Lyon is the largest industrial exhibition in France.

The second accolade came from ST Microelectronics. The global semiconductor leader recently hosted its 2013 Innovation Night showcasing the successful outcome of its collaboration with innovative French start-ups and SMEs. GYS was recognised for its collaboration with ST and Bruno Bouygues, the GYS CEO, was on hand to receive the award.

GYS recently launched a new range of 3-Phase MIG welding machines, the TRIMIG family. Featuring six models ranging from 200A to 350A, all benefit from four-roll wire feeders and 'GYS synergic control' for rapid and simple operation. The range covers a multitude of configurations, from simple 'compact' versions, air-cooled separates as well as the TRIMIG 350-4S DUO DV with the option of Twin Torch configuration which is suitable for applications involving two wire types.
